

# Neurology

## Leading the way in Neurology and Neurosurgery

At Paragon Veterinary Referrals we provide a complete diagnostic and treatment service for all types of neurological and associated conditions. Covering neurological disorders, spinal issues and brain diseases, our clinicians can help with the diagnosis, treatment and management of a wide range of conditions.

By using the latest tests alongside state-of-the-art imaging and surgical equipment we can identify the underlying cause that may be leading to a loss of limb function, nerve problems, muscle disease or seizures. Having a detailed understanding of these causes allows us to create the most appropriate treatment pathway - be that medical or surgical.

At Paragon Veterinary Referrals we will work with you and your clients to discuss suitable treatment options with the wellbeing of the patient always at the forefront of our minds.

### Our Neurology Team

The Neurology team at Paragon Veterinary Referrals is led by Massimo Mariscoli DVM DipECVN MRCVS, EBVS® European Specialist in Veterinary Neurology

The team works closely with the other experienced Specialists from across the practice as part of a multi-disciplinary approach to patient care. We believe this holistic approach delivers the best possible outcomes for your clients and their pets.

But that's just part of the teamwork required. We were founded on the belief that primary care practices, Specialists and pet owners working together can do more for our patients than any of us working alone. This collaborative approach flows through everything we do.

## Facilities and skills

The experience of our Specialists combined with our excellent facilities allow us to provide one of the most advanced neurology services in the UK.

We recognise every patient and their circumstances is unique. That's why our diagnostic processes can include a combination of blood tests, imaging (MRI or CT scanning, myelography), cerebrospinal fluid sampling, advanced electrodiagnostics (electromyography, nerve conduction velocities) and nerve or muscle biopsy.

Once a diagnosis has been made, we will discuss the findings and our recommendations with you and your clients. We accept referrals in all areas of neurology and neurosurgery including:

- Epilepsy including cases refractory to treatment
- Spinal cord diseases including disc disease, wobbler syndrome, Chiari malformation
- Congenital malformations including surgery for hydrocephalus and spinal malformations
- Brain and spinal trauma including fractures
- Brain and spinal tumours including diagnosis, surgical and medical management
- Infectious and inflammatory CNS diseases
- Neuromuscular diseases
- Peripheral neuropathies
- Movement disorders

## Providing the best possible outcomes

Neurology and Neurosurgery are an incredibly complex field. But skilled and experienced Specialists using state-of-the-art equipment can deliver life-changing results. Our multi-disciplinary holistic approach means we will work together to deliver the best possible outcomes for your clients and their pets.

### Case referral:

The quickest way to refer a case is to complete our online referral form at [www.paragonreferrals.co.uk/refer](http://www.paragonreferrals.co.uk/refer)  
We can also accept referrals by email, telephone, fax or post.
