

Oncology

Our primary objective is compassionate and comprehensive cancer diagnosis, treatment and care.

Veterinary cancer treatment continues to make huge advancements. Today conditions that were not treatable years ago can be sent into remission. While a diagnosis of cancer is both physically and emotionally draining, with advances in treatments in many cases it can be beaten or at least controlled for long periods of time.

At Paragon Veterinary Referrals we will work with your practice to support your clients and patients when you need it. We will discuss treatment options and compassionately guide them through what will likely be a very challenging time.

A multi-pronged attack

Cancer can be one of the most complex and difficult diseases to diagnose and treat. Our oncology department uses a multi-modal approach, with traditional therapies like surgery, chemotherapy and radiation being used alongside more advanced approaches such as immunotherapy, gene-therapy and molecular targeted therapy. Today's treatment regimens are much kinder on patients than they were previously, which is good news for everyone involved.

Our Oncology Team

The team at Paragon is led by Rodney Ayl, a double boarded American Diplomate in Medical and Radiation Oncology supported by European and RCVS Specialists in Medicine, Anaesthesia, Neurology, Soft Tissue Surgery and Critical Care. Our Oncology team works side-by-side with you throughout diagnosis, treatment and ongoing care.

Paragon Veterinary Referrals was founded on the belief that primary care practices, Specialists and pet owners working together can do more for our patients than any of us working alone. That collaborative approach flows through everything we do.

Facilities and skills

Our treatment procedures encompass chemotherapy, surgical oncology, molecular targeted therapies, radiation therapy (consultations only), immunotherapy and cryotherapy.

These are supported by our advanced diagnostic imaging capabilities which includes digital radiography, ultrasound, guided aspirates /biopsies, MRI & CT scanning.

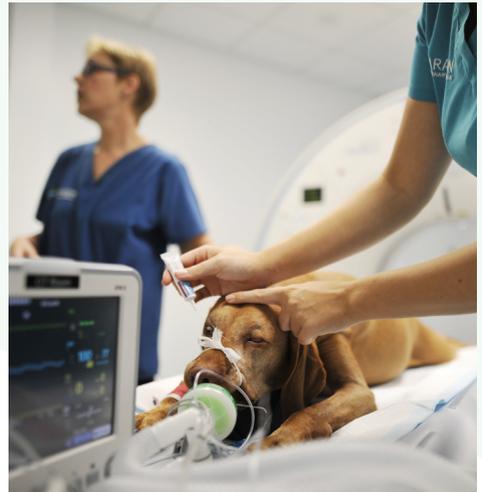

We also have extensive diagnostic testing services covering haematology, biochemistry and coagulation testing in-house, fine needle aspirates/ cytology, tissue and bone biopsies, bone marrow aspirates/cytology and biopsy.

Providing the best possible prognoses and outcomes

Cancer can be one of the most complex and difficult diseases to diagnose and treat. But by working together, with a multi-disciplinary holistic approach, we believe we can deliver the best possible outcomes for your clients and their pets.

Case referral:

The quickest way to refer a case is to complete our online referral form at www.paragonreferrals.co.uk/refer
We can also accept referrals by email, telephone, fax or post.

Want to learn more about our oncology department and clinicians, as well as our other veterinary specialist services, or need some advice?

We welcome calls if you require pre-referral advice about a patient, even if no referral follows.
